

The 3-in-1 mobility rider for little explorers

Independence is how we roll.

Scooot provides an early experience of independence for lots of kids with limited movement. It frees them to explore, play with pals, chase big brothers and race little sisters without any help.

Crawl lets kids move and explore on their tummy, helping to strengthen upper body and tummy muscles as they lift their heads and shoulders. In Scoot function, kids can sit upright and move around using their feet - this encourages their trunk and pelvis to stabilise, freeing up their hands to handle objects, play and explore.

2-in-1 Scooot

3-in-1 Scooot

Ride lets kids self-propel and manouver around the floor, building upper body strength and experiencing independent movement as they go.
